434 Chapter 6 Additional Topics in Trigonometry Area of an Oblique Triangle The area of any triangle is one-half the product of the lengths of two sides times the sine of their included angle. That is, $\text{Area} = \frac{1}{2} bc \sin A = \frac{1}{2} ab \sin C = \frac{1}{2} ac \sin B$. Example 6 $a = 90$ m $b = 52$ m $C = 102^\circ$ FIGURE 6.8 To see how to obtain the height of the obtuse
