Q. Write an equation for the ellipse with each set of characteristics. Then answer the question. Vertices  $(-2, -4)$ ,  $(-2, 8)$   
Length of minor axis is 10

## Conic Sections | Trigonometry Quiz - Quizizz

Key Takeaways Key Points. Conic sections are a particular type of shape formed by the intersection of a plane and a right circular cone. Depending on the angle between the plane and the cone, four different intersection shapes can be formed. The types of conic sections are circles, ellipses, hyperbolas, and parabolas.

produce the three conic sections, ellipse, parabola and hyperbola. It was Apollonius of Perga, (c. 255-170 BC) who gave us the conic sections using just one cone. Key Point

## **Conic sections - mathcentre.ac.uk**

Certain key points are common to all conics (vertices, foci, and axes, to name a few), so you start by plotting these key points and then identifying what kind of curve they form. The equations of conic sections are very important because they tell you not only which conic section you should be graphing but also what the graph should look like.
