the IVP if I $y(a) = y_0$; I $y'(t) = f(t; y(t))$ for all $t \in [a; b]$. Numerical

If $y(x)$ is the exact solution to (1.7), its graph is a curve in the xy -plane passing through the point (x_0, Y_0) . A discrete numerical solution of (1.7) is defined to be a set of points $[(X_i, u_i)]_{i=0}^n$, where $u_0 = Y_0$ and each point (X_i, u_i) is an approximation to the corresponding point $(X_i, Y(X_i))$ on the solution curve.
